GUZZLER®
Subsidiary of Federal Signal Corporation

OFFLOADING SOLUTIONS

Offload while vacuuming.

How do you get even more productivity from a Guzzler? By specifying Guzzler's swing-out loading cyclone (XCR). The XCR gives you the flexibility to perform a wide range of efficient drumming and material recovery operations quickly and easily. Unlike other batch unloading systems, the patented swing-out cyclone delivers true continuous production capability. Which means the XCR is the only system that delivers simultaneous vacuuming and offloading capability. No time wasted on trips to the dumpsite. In addition, the cyclone may be raised to a 7.5 ft ground clearance and the valves operated manually or automatically for controlled unloading into a wide range of disposal vessels.
