

High-dump into roll-off containers.

The Guzzler NX is now available with a high-dump option that lets you dump debris directly into roll-off boxes up to five feet high. Using a heavy duty, telescopic, hydraulic cylinder at the rear of the Guzzler NX chassis, the debris body lifts upward and slightly backward for extra clearance. This allows for significant efficiency in dumping. In addition, the operator can choose to dump material in either normal- or high-dump mode.

The design of the high-dump option is combined with a new electronic control system that sequences the high-dump process. This enhances the overall stability and safety of the unit. With the high-dump option and Guzzler NX's very low sound levels, better fuel economy, increased loading capacity and patent-pending VR (Vacuum Recovery) Technology, Guzzler NX offers value like no other.

4-bar linkage

Know which offloading option best serves you.

Since no single offloading system is right for every situation, it is important to consider your specific offloading needs and to choose a system that is right for you. As new regulations have continually made dumping tougher, Guzzler has led the industry in meeting the needs of contractors by offering more application-specific offloading systems than any other manufacturer.

Batch Systems.

A batch system is ideal when your specific offloading application requires materials to be vacuumed first, and then offloaded later. Batch works well when the flow of materials needs to be regulated or there is a long distance to the offload container. Guzzler offers a wide selection of batch offloading systems, including high dump (ACE) vertical auger, pressure offload, as well as the new Dense Phase offload.

Continuous Systems.

Continuous offloading systems allow you to vacuum and offload at the same time. These systems reduce the downtime of unloading vacuumed material and get you in and out of jobs quickly. Guzzler's continuous offload systems include the XCR (swing out cyclone), rear mounted cyclone and the Cycrane.

Contact Guzzler for more details and for assistance choosing the right offloading solution for your needs.
